**CALCOLO CAPACITA' OTTIMALE**

**LT = C x h x 1.1**

LT = litri serbatoio / fuel tank litres

C = consumo in LT/h da tabella / consumption in lt/h – see chart

h = ore di lavoro desiderate / working hours needed

\* i dati del consumo orario sono la media delle varie motorizzazioni quindi sono da ritenersi indicativi. Per ottenere dati precisi consultare le schede tecniche del singolo motore;  
 \* abbinare sempre al serbatoio maggiorato la pompa estrazione olio (accessorio 7.3);  
 \* i prezzi dei suddetti serbatoi maggiorati potranno variare senza preavviso;

\* the data of the fuel consumption per hour are approximate, as they are the average of the consumptions of all the engines. To get precise please consult the technical specs of each engine;  
 \* the oil pump must be always ordered together with oversized fuel tanks(accessory 7.3);  
 \* prices of oversized fuel tanks, can be changed without notice;
